Flex box

This unique semi-curved light box has been created through a combination of two of our systems.

The **Flex Box** is a great solution for above the counter menu display in fast food & restaurant areas.

Snap box

The **Snap Box** is our modular system for combination of snap poster frames with conventional light box. A unique design of our **Light box 150** profiles makes it very easy to connect the snap poster frames

into specially designed drill-free slots in the **Light box 150** profile.

The **Snap Box** can be easily used as single or double sided light box with no extra components.

Radius snap light

One of our latest designs is a curved face light box system with a built in snap frame. The side profiles are snap profiles allowing for quick and easy poster change.

The **Radius Snap Light** system was designed to give you an elegant solution for curved internally lit poster display, specially fitted to all DIN standard poster sizes between A3 – 70x100cm.

The **Radius Snap Light** system also has a double-sided profile that can be used as a totem display unit.

Poster displays

An endless variety of poster display stands and brochure holders can be made with our modular systems. These are the standard models available. Special models can be easily designed and manufactured thanks to the modularity of our systems.

MODEL – A
A classic pavement stand:
Poster sizes: A2, A1, A0, 50x70, 70x100

Easy frame

The **Easy Frame** system is our traditional snap poster frame. The front profile is a 34 mm round clip profile combined with drill-free molded ABS & aluminum corners. You can use the **Easy frame** for almost any size needed.

Radius snap slim

The **Radius Snap Slim** is our latest design for modern snap poster frames, using snap side profiles and an elegant light curved front.

The **Radius Snap Slim** is also designed to fit all DIN standard poster sizes between A3 – 70x100 cm.

MODEL-T
A one-leg post with single or double side display unit.
Poster sizes: A4 (landscape), A3.

MODEL – D

A unique model fitted for shopping malls & hotels. Internal lighting is optional.
Poster sizes: A1, 70 x 100

MODEL – W

A two-leg, 3 level brochure holder. 3 shelves sizes are available: 25cm, 57cm, 75 cm.
This model can be supplied either with a base metal plate or with horizontal profiles (like the HF model).
A special wall hanging brackets are optional.

MODEL – I

A triangular brochure kiosk, with clear acrylic brochure pockets. This model can be made by special order and can be fitted to desired sizes.

MODEL – HF

A classic two-leg stand with double sided **Easy frames**. A brochure shelf can be added.
Poster sizes: A1, 50x70, 70x100

MODEL – HC

A classic two-leg stand with double-sided **Radius Snap**. A brochure shelf can be added.
Poster sizes: A1, 50x70, 70x100

MODEL – P Based on our **Radius snap** system, a brochure shelf can be added.
Poster sizes: A2, 50x70

Fast flex

The name of the system is in the heart of its design. Using the **Fast Flex** system for tension flexible faced signs is much easier than other conventional tensioning systems. There is no need to use hammers, screwdrivers, stitching, welding, clamping pliers etc! for tension: the only tool is a simple tensioning lever. The round cover profile gives a smooth appearance.

Lightbox 180

Our basic rigid light box system is based on a 180 mm width profile suitable for big outdoor signs. The main profile of the Light box 180 is our light box profile recommended to use with our **Fast flex** tensioning systems.

Lightbox 150

The **Lightbox 150** is our most commonly used light box system. Its design is completely modular and all of its components are of aluminum extrusions. The building of a light box using the **Lightbox 150** profiles is an easy job.

The main body profiles are fitted to be used as single or double-sided signs with almost the same items. Its light weight but strong design and smooth round cover makes this light box system a very popular product.

Lightbox 130

LightBox 130 is a unique design double-sided, small sized light box, designed to give a perfect solution for indoor and parking garage signage.

The **LightBox 130** is based on one main body profile (130 mm) without clips or other disassembling parts. The 10mm round ending of the main body profile gives it a clean smooth appearance and is perfect for building very small signs.

Lightbox 70

LightBox 70 a slim single or double-sided light box designed especially for use as Exit or Fire escape directional signs or for small round cornered light boxes. Only the main body profile and the molded aluminum corners are needed to build a light box. The profile is easy to cut; no mitre cuts required.

Radius light

Radius Light is our basic profile system for curved face internally lit signs. The simplicity of making a sign with the **Radius light** system combined with its highly elegant appearance is its great success. A single or double-sided version is available. The variety of sizes is unlimited depending on width and shape of the laser cut aluminum end cups.

Our standard end cups sizes are 30-100 cm. The length of a sign is unlimited as joining sign segments together is easy.

Radius totem

Radius totem is the monolith version of the **Radius** series. The strong rigid double-sided profile makes the building of a small - medium internally lit or non-lit totem sign easier than ever.

Radius slim

To complete the range of curved face signs, we present the **Radius slim**. It is a simple to use profile system. Only one profile and a few simple materials that every one has in his workshop, is all you need to create a modern, elegant directional signage. A creative imagination and a use of various available materials can create amazing signs.
